USDA GIVES GRANTS TO SUPPORT BEGINNING FARMERS AND RANCHERS ACROSS 24 STATES

Agriculture Secretary Tom Vilsack announced more than \$18 million in grants to organizations across 24 states to help beginning farmers and ranchers with the training and resources needed to run productive, sustainable farms. Under the Secretary's leadership since 2009, the U.S. Department of Agriculture (USDA) has driven a number of efforts meant to spur interest in agriculture and provide the necessary support to young, beginning and socially-disadvantaged producers.

"In the past few decades, U.S. agriculture has become the second most productive sector of the American economy thanks to farmers adopting technology, reducing debt, and effectively managing risk," said Vilsack. "Last year, America's farmers, ranchers and producers achieved record farm income and record exports. To protect and sustain [these successes](#), we must continue to build an agriculture industry diverse and successful enough to attract the smartest, hardest-working people in the nation. These grants will help beginning farmers and ranchers overcome the unique challenges they face and gain knowledge and skills that will help them become profitable and sustainable."

USDA's National Institute of Food and Agriculture (NIFA) awarded the grants through its Beginning Farmer and Rancher Development Program (BFRDP) established through the 2008 Farm Bill. In his June 30, 2010 testimony before the Senate Committee on Agriculture, Nutrition & Forestry, the Secretary reminded Congress of the need to attract thousands of new producers in the coming years as American farmers and ranchers continue to age. Vilsack urged members of Congress to address this critical need when drafting a 2012 Food, Farm and Jobs bill. That legislation remains unfinished, while the current Farm Bill is set to expire on September 30, 2012.

BFRDP will provide \$18 million in funding this year, the fourth year of the program. Future funding is dependent on congressional reauthorization. For more information on the BFRDP program, and for a list of fiscal year 2012 awards, visit [NIFA](#).

AGRICULTURE SECRETARY VILSACK EXTENDS EMERGENCY GRAZING TO ASSIST RANCHERS IMPACTED BY DROUGHT

Agriculture Secretary Tom Vilsack announced a two-month extension for emergency grazing on Conservation Reserve Program (CRP) acres, freeing up forage and feed for ranchers as they look to recover from this challenging time. This flexibility for ranchers marks the latest action by the U.S. Department of Agriculture to provide assistance to producers impacted by the drought, which has included opening CRP and other conservation acres to emergency haying and grazing, lowering the interest rate for emergency loans, and working with crop insurance companies to provide flexibility to farmers.

"It is also important that our farmers, ranchers and agribusinesses have the tools they need to be successful in the long term, said Vilsack. That's why President Obama and I continue calling on Congress to pass a comprehensive, multi-year Food, Farm and Jobs Bill that will continue to strengthen American agriculture in the years to come, ensure comprehensive disaster assistance for livestock, dairy and specialty crop producers, and provide certainty for farmers and ranchers."

The Secretary also designated 147 additional counties in 14 states as natural disaster areas-128 counties in 10 states due to drought. In the past seven weeks, USDA has designated 1,892 unduplicated counties in 38 states as disaster areas-1,820 due to drought-while USDA officials have fanned out to more than a dozen drought-affected states as part of a total U.S. government effort to offer support and assistance to those in need.

To assist producers, USDA is permitting farmers and ranchers in drought stricken states that have been approved for emergency grazing to extend grazing on CRP land through Nov. 30, 2012, without incurring an additional CRP rental payment reduction. The period normally allowed for emergency grazing lasts through Sept. 30. The extension applies to general CRP practices (details below) and producers must submit a request to their Farm Service Agency county office indicating the acreage to be grazed. USDA's continuing efforts to add feed to the marketplace benefits all livestock producers, including dairy, during this drought. Expanded haying and grazing on CRP acres, along with usage of cover crops as outlined last week by the Secretary, has begun providing much needed feed to benefit all livestock, including dairy.

At the direction of the President, Secretary Vilsack is helping coordinate an Administration-wide response that has included: the National Credit Union Administration's increased capacity for lending to customers including farmers; the U.S. Department of Transportation's emergency waivers for federal truck weight regulations and hours of service requirements to get help to drought-stricken communities; and the Small Business Administration's issuance of 71 agency declarations in 32 states covering 1,636 counties, providing a pathway for small businesses, small agricultural cooperatives and non-farm small businesses that are economically affected by the drought in their community to apply for Economic Injury Disaster Loans (EIDL). President

Obama also stressed the need for the entire Administration to continue to look at further steps it can take to ease the pain of this historic drought. Visit [USDA Newsroom](#) for details the Department has announced to help farmers and ranchers over the past seven weeks.

The U.S. Drought Monitor indicates that 63 percent of the nation's hay acreage is in an area experiencing drought, while approximately 72 percent of the nation's cattle acreage is in an area experiencing drought. Approximately 86 percent of the U.S. corn is within an area experiencing drought, down from a peak of 89 percent on July 24, and 83 percent of the U.S. soybeans are in a drought area, down from a high of 88 percent on July 24. During the week ending August 26, USDA's National Agricultural Statistics Service reported that 52 percent of U.S. corn and 38 percent of the soybeans were rated in very poor to poor condition, while rangeland and pastures rated very poor to poor remained at 59 percent for the fourth consecutive week. Visit [USDA Newsroom](#) for the latest primary counties and corresponding states designated as disaster areas for drought and other reasons.

**LIVESTOCK PRODUCERS AFFECTED BY DISASTERS
URGED TO KEEP GOOD RECORDS;
THERE COULD BE POTENTIAL ASSISTANCE DEPENDING ON ACCURATE,
TIMELY DATA FOR EXPEDITED HELP**

USDA Farm Service Agency (FSA) Administrator Juan M. Garcia urged livestock producers affected by natural disasters such as Hurricane Isaac to keep thorough records of their livestock and feed losses, including additional expenses for such things as feed purchases because of lost supplies.

"There are extraordinary circumstances caused by a variety of disasters from fires in the west, floods in Florida, Hurricane Isaac in the Gulf region, storms in the Mid-Atlantic and drought and heat affecting the heartland," said Garcia. "Each of these events is causing economic consequences for ranchers and producers including cattle, sheep and dairy operations, bee keepers and farm-raised fish, and poultry producers."

FSA recommends that owners and producers record all pertinent information of natural disaster consequences, including:

- Documentation of the number and kind of livestock that have died, supplemented if possible by photographs or video records of ownership and losses;
- Dates of death supported by birth recordings or purchase receipts;
- Costs of transporting livestock to safer grounds or to move animals to new pastures; and
- Feed purchases if supplies or grazing pastures are destroyed.

Secretary Vilsack also reminds producers that the department's authority to operate the five disaster assistance programs authorized by the 2008 Farm Bill expired on Sept. 30, 2011. This includes SURE; the Livestock Indemnity Program (LIP); the Emergency Assistance for Livestock, Honey Bees, and Farm-Raised Fish (ELAP); the Livestock Forage Disaster Program

(LFP); and the Tree Assistance Program (TAP). Production losses due to disasters occurring after Sept. 30, 2011, are not eligible for disaster program coverage.

**GREAT NEWS FOR AGRICULTURE:
USDA NOW FORECASTING RECORD FARM INCOME THIS YEAR**

The Department of Agriculture made a big change in its farm income forecast for this year compared to its projection made back in February. USDA Chief Economist Joe Glauber gave some of the highlights of the new USDA farm income forecast for calendar year 2012.

**AS SCHOOL GETS BACK IN SESSION THE FIRST PHASE OF THE
NEW SCHOOL MEALS STANDARDS IS IMPLEMENTED**

2012 marks the first of the three-year phase-in of the new school meals standards. The new standards ensure students are offered healthier, more nutritious foods in the lunch line. The new nutrition standards for school meals, implemented as a result of the historic Healthy, Hunger-Free Kids Act of 2010, will help to combat child hunger and obesity and improve the health and nutrition of the nation's children.

"Improving the nutrition of school meals is an important investment in the future of America's children," said Agriculture Under Secretary for Food and Nutrition Services Kevin Concannon. "We know that healthy food plays a vital role in strengthening a child's body and mind and the healthier school meals will help to ensure our children can learn, grow, and reach their full potential."

Starting this school year, schools will phase in the nutrition standards over a three-year period. Schools will focus on changes in the lunches in the first year, with most changes in breakfast to take place in future years. The new meal standards:

- Ensure students are offered both fruits and vegetables every day of the week;
- Substantially increase offerings of whole grain-rich foods and low-fat milk or fat-free milk varieties;
- Limit calories based on the age of children being served to ensure proper portion size; and
- Focus on reducing the amounts of saturated fat, trans fats and sodium.

The new meal requirements are raising standards for the first time in more than fifteen years and improving the health and nutrition of nearly 32 million kids that participate in school meal programs every school day. The healthier school meals are a key component of the Healthy, Hunger-Free Kids Act, which was championed by the First Lady as part of her Let's Move! campaign and signed into law by President Obama. First Lady Michelle Obama Welcomes Students Back To School.

USDA's Food and Nutrition Service (FNS) oversees the administration of 15 nutrition assistance programs, including school meals programs, that touch the lives of one in four Americans over the course of a year. These programs work in concert to form a national safety net against hunger. Visit www.fns.usda.gov for information about FNS and nutrition assistance programs. To learn about the meal standards, go to www.fns.usda.gov/healthierschoolday.

OFF MIKE

THE WORLD FOOD PRIZE

FIRST WINNER OF NEW NORMAN BORLAUG AWARD FOR FIELD RESEARCH AND APPLICATION – The award is endowed by the Rockefeller Foundation. The annual award recognizes researchers under 40 in the early stages of their work who emulate the scientific innovation and dedication demonstrated by Nobel Peace Prize Laureate Dr. Norman Borlaug.

The winner is a young Indian social scientist whose research on groundwater resources in agriculture led to major policy changes benefiting thousands of farmers in West Bengal. **Dr. Aditi Mukherji**, a senior researcher at the International Water Management Institute's New Delhi office, has been named the winner of the new award. **Mukherji** will be formally presented with a \$10,000 award on October 17, 2012, in Des Moines, Iowa, as part of this year's World Food Prize international symposium.

Mukherji's study included a her intense fieldwork surveying more than 4,000 groundwater users where she discovered that smallholder farmers in water-abundant eastern India were being prevented by certain policy restrictions from gaining access to the water resources needed for irrigating their crops. She then worked closely with the farmers and village residents to ensure that their concerns were fully recorded and that their collective voice was heard by the policy makers.

"Dr. Mukherji has demonstrated qualities that emulate Dr. Borlaug's ingenuity and perseverance in transferring his scientific breakthroughs to farmers and hungry people around the world through the gateway of government policy and action," said **Amb. Kenneth M. Quinn**, president of the World Food Prize Foundation. "Like Dr. Borlaug, she has shown persistence, innovation, effective communication, contribution to science, and application of that science for policy change to improve lives and livelihoods."

"Access to reliable, affordable and timely irrigation are very powerful tools of poverty alleviation," said **Mukherji**. "What truly inspires me is the impact that one's research can make on the lives of the poor by providing more food on their table – something that Dr. Borlaug showed us years ago through his pioneering work in Mexico, India and elsewhere. He is my ultimate role model."

Mukherji has a Ph.D degree in Human Geography from the University of Cambridge in the United Kingdom. She was also educated at Presidency College, Calcutta; Jawaharlal Nehru University, Delhi; and the Indian Institute of Technology, Mumbai.
